

PRESS RELEASE (2 pages)

## TRINGAboat launches the e-TRINGA The elegance of silence

**Lannion / France, September 9th 2023** – The e-TRINGA is gifted with an electrical road and land propulsion, powered by on-board motor and battery pack to replace the combustion engine. This technology brings discretion and stealthiness when leaving a garden and driving on road. Besides, all the present qualities of TRINGA are preserved:

- road homologation (roadable boat meaning homologated and insured on public roads)
- unrivaled maneuverability
- guaranteed road capability of 4 miles in road propulsion, now in a very quiet way.
- easy battery charging from domestic mains.
- battery charging from outboard engine when sailing
- easy control thanks to the intuitive touch-pad

The e-TRINGA is now available to order on both models T650 (single out-board engine up to 175 HP) and T700 (twin out-board engine 2 x 90 HP).

The silence of the e-TRINGA crowns with elegance the unique lifestyle that TRINGAboat offers to worldwide boaters.

## About TRINGAboat company:

The worldwide mission of TRINGAboat is to propose to boaters living by less than 2 miles from the shore, the absolute luxury of an access to water that is immediate, simple, quick, and safe, even in case of unavailability of harbour facilities.

Indeed, thanks to its worldwide-unique roadable capability and road regulation compliance, TRINGA is also a genuine road self-powered vehicle, to reach the sea by the road from one's garden, without leaving one's helm chair, and within a few minutes only.

Consequently, TRINGA operation needs no harbour berths, mooring, dinghy, tide schedule, trailer, tug car, parking slot.

Thus, TRINGA turns out instantly any home distant from the shore, into a genuine marina.

Additionally, TRINGA is the unique amphibious boat world-wide which seaworthiness and appearance is not spoiled by visible landing gears (wheels or tracks), the latter being fully retracted within the TRINGA hull at sea, like a plane.

This design is allowed by a unique innovative technology that is only mastered by TRINGAboat.

Thanks to its digital, intuitive, and lean touch-pad interface, learning to drive a TRINGA is a quick and easy process.

Thanks to an extended options choice, TRINGA provides an optimal leisure experience whatever your favourite activities (promenade, picnic, water sports, fishing, cooking...).

TRINGAboat has been founded in 2011, manufactures and sells in France since 2020, and presently launches international sales of its TRINGA to fulfill boaters world-wide.
